Explain 108,106,111

[Reply](#)

paral 21 December 2014 at 13:44

13 and 14 were coppedasted from 12 and comments were not corrected per example.

As a result both contain phrase « --there are two " _ " »

In reality 13 should state « -- there are four " _ " » and 14 should have nothing - there are no underscores there.

can you please explain the date format conversion. Are the styles/date format code(106,108 etc.) pre-defined and we have to remember them individually or there is some logic.
